

OtoProf®

**Deep Cleansing Ear Wax
Softening Wash for Dogs and Cats**
In clinic ear wash without trauma

Ingredients

- Dioctylsodium sulfosuccinate is a powerful wax softener, which quickly allows the wax to be removed.
- Carbamide peroxide is a foaming agent which brings the wax to the surface, allowing it to be removed without discomfort to the animal.

Uses

- Use to clean the ear canal when excessive ear wax is present or impacted.
- Excellent for initial cleaning of the outer ear and external auditory canal.
- OtoProf® can be used instead of invasive methods.
- Ensure the tympanic membrane is intact.
- After using OtoProf® use Clorexyderm® Oto to maintain ear cleanliness.

How to use

1. Sedate the animal if necessary.
2. Shake bottle well before use.
3. Introduce OtoProf® into the ear and massage the base of the ear gently to activate the foaming action.
4. Make sure the product does not run out of the ear before it has time to work. If necessary use some cotton wool to plug the ear during this time.
5. Remove the debris which the foaming action of OtoProf® dislodges.
6. Rinse the ear thoroughly several times with lukewarm water.
7. Dry the whole ear and external auditory canal carefully.
8. Due to the deep cleansing action of OtoProf®, wait for six hours before applying any ear drops.

Caution

Due to the deep cleansing action of OtoProf®, the product may cause slight, temporary inflammation of the ear canal in sensitive animals.
